

Inventory Reporting at Tank Farms, Terminals & Refineries

Timely, Accurately, Daily,

FuelsManager Oil & Gas automatically generates a wide variety of standard inventory reports. It also provides access to real-time and archived data so that facility operators can easily generate inventory reports for their specific business needs.

***Record and review daily activities
in a clear and concise manner.
Reports can be generated
from historical or live data and
printed, as required, or exported
for use in standard business
applications***

Easily Report on all Your Inventory Management Activities

Two types of predefined reports are available: real-time and historical. Real-time reports display live data, while historical reports are created from archived information within FuelsManager. Example reports include:

- Current Tank Inventory
- Tank Inventory by Date/Time, such as a Midnight Inventory Report
- Active and Inactive Tank Reports
- Last Full Day/Week/Month Tank Change Report
- Pipeline Inventory Report

Automatic Printing and Exporting

Historical reports can be printed as required or exported for use in Microsoft Office. Real-time reports can be printed as required or scheduled to print at defined times, such as at the change of an operator shift. Simply activate or print the report from the report dialog or from the context menu in the report task group.

Create Your Own Reports

If you require greater flexibility, FuelsManager Oil & Gas Professional edition provides a built-in, real-time report editor for modifying existing reports or creating new reports for your specific business operations.

Inventory Reporting

at Tank Farms, Terminals & Refineries

Each report can be displayed directly from the user interface quickly and easily.

- ▶ Select reports from the task bar menu lists, or from the report select dialog
- ▶ Use the Report Tool Bar to navigate, zoom, print or export

The screenshot displays the '7-Day Tank Change Report' window. On the left, a 'Task Bar Report Lists' pane shows a tree view of reports under 'Historical Reports'. At the top, a 'Report Tool Bar' contains icons for navigation and actions. The main area, labeled 'Report Data', shows a table for '7-Day Tank Change Report' by product 'CRUDE'. The table lists data for three tanks (10, 11, and 12) with columns for Record Time, Level, Gross Vol, Net Vol, Remain Vol, and Avail Vol. Each tank entry includes 'BEGIN' and 'END' rows with corresponding values and a 'TOTAL CHANGE' row.
